Chapter 2: Propositional Logic

Q1: Decide whether the following statements are propositions. Justify your answer.

1. $2 + 2 = 5$.

2. $2 + 2 = 4$.

3. $x = 3$.

4. Every week has a Sunday.

5. Have you read "Catch 22"?

Q2: Show the second law of de Morgan:

$$\neg(p \vee q) \equiv \neg p \wedge \neg q.$$

Q3: Show that second absorption law $p \wedge (p \vee q) \equiv p$ holds.

Q4: These two laws are called distributivity laws. Show that they hold:

1. Show that $(p \wedge q) \vee r \equiv (p \vee r) \wedge (q \vee r)$.

2. Show that $(p \vee q) \wedge r \equiv (p \wedge r) \vee (q \wedge r)$.

Q5: Verify $\neg(p \vee \neg q) \vee (\neg p \wedge \neg q) \equiv \neg p$ by

- constructing a truth table,
- developing a series of logical equivalences.

Q6: Using a truth table, show that:

$$\neg q \rightarrow \neg p \equiv p \rightarrow q.$$

Q7: Show that $p \vee q \rightarrow r \equiv (p \rightarrow r) \wedge (q \rightarrow r)$.

Q8: Are $(p \rightarrow q) \vee (q \rightarrow r)$ and $p \rightarrow r$ equivalent statements?

Q9: Show that this argument is valid:

$$\neg p \rightarrow F;$$

$$\therefore p.$$

Q10: Show that this argument is valid, where C denotes a contradiction.

$$\neg p \rightarrow C;$$

$$\therefore p.$$

Q11: Determine whether the following argument is valid:

$$\begin{array}{l} \neg p \rightarrow r \wedge \neg s; \\ \hline t \rightarrow s; \\ \hline u \rightarrow \neg p; \quad / \\ \hline \neg w; \quad / \\ \hline u \vee w; \quad / \quad u \\ \hline \therefore t \rightarrow w. \end{array}$$

Q12: Determine whether the following argument is valid:

$$\begin{array}{l} p; \\ \hline p \vee q; \\ \hline q \rightarrow (r \rightarrow s); \\ \hline t \rightarrow r; \\ \hline \therefore \neg s \rightarrow \neg t. \end{array}$$

$$\begin{array}{l} p \vee q \\ \swarrow \searrow \\ t \rightarrow r \quad \neg s \rightarrow \neg t \\ \swarrow \searrow \\ t \rightarrow s \end{array}$$
